

MODERN TECHNOLOGIES OF REPRODUCTION NATIVE FISH SPECIES

International
scientific-practical
conference

May 22, 2019.
Mukachevo, Ukraine

**Network of Aquaculture Centers in Central-Eastern Europe (NACEE)
Institute of Fisheries of the National Academy of Agrarian Sciences of Ukraine**

**MODERN TECHNOLOGIES
OF PROPAGATION AND RESTOCKING
OF NATIVE FISH SPECIES**

**International Scientific and Practical Conference,
May 22, 2019. Mukachevo, Ukraine**

Kyiv – 2019

Modern Technologies of Propagation and Restocking of Native Fish Species : International Scientific and Practical Conference, May 22, 2019 : book of abstracts. Mukachevo, Ukraine, 2019. 64 p.

Organizer – Network of Aquaculture Centers in Central-Eastern Europe (NACEE) (<http://www.nacee.eu/ru>) & Institute of Fisheries of the National Academy of Agrarian Sciences of Ukraine (<http://if.org.ua>).

Scientific and Organizing Committee:

Ihor Hrytsyniak, Doctor of Agricultural Sciences, Professor, Academician of the National Academy of Agrarian Sciences of Ukraine, Director Institute of Fisheries of the NAAS (chairperson), Kyiv – UKRAINE;

Vasily Ustych, Candidate of Biological Sciences, Director SE «Transcarpathian scientific and research station of salmon culture and restoration of rare fish species», Mukachevo – UKRAINE;

Vitaliy Bekh, Doctor of Agricultural Sciences, Senior Research Scientist, Head of the Fish Selection Department, Institute of Fisheries of the NAAS, Kyiv – UKRAINE;

Natalia Kolesnyk, Candidate of Agricultural Sciences, Senior Research Scientist, Head of the laboratory of International Scientific and Technical Collaboration and Intellectual Property, Institute of Fisheries of the NAAS, Kyiv – UKRAINE;

Ruslan Kononenko, Candidate of Veterinary Sciences, subdean of Faculty of Livestock and Aquatic Bioresources, National University of Life and Environmental Sciences of Ukraine, Kyiv – UKRAINE;

Artūrs Škute, Doctor of Biological Sciences, Professor, Director Institute of Ecology Daugavpils University, Daugavpils – LATVIA;

Oleg Marenkov, Candidate of Biological Sciences, Associate Professor of General Biology and Aquatic Bioresources, Dnipro National University named after O. T. Gonchar, Dnipro – UKRAINE;

Mansur Yuldashov, Candidate of Biological Sciences, Deputy Director for Science, Scientific Research Institute of Fish Culture, Tashkent – UZBEKISTAN;

Karol Weglarz, Doctor of Agricultural Sciences, Professor, foreign member of the National Academy of Agrarian Sciences of Ukraine, President of the Research and Production Research Branch, Institute of Zootechnics, Krakow, POLAND;

Sophiko Diasamidze, Head of board of Organic Aquaculture Association «Foregi», Batumi – GEORGIA;

Pavlo Kutishchev, Candidate of Biological Sciences, Associate Professor of the Department of Water Bioresources & Aquaculture, Kherson State Agrarian University, Kherson – UKRAINE;

Elena Zubcov, Corresp. Member of Academy Sciences of Moldova, Professor, Doctor habilitatus, Head of the Laboratory of Hydrobiology and Ecotoxicology, Institute of Zoology Academy of Sciences of Moldova, Chişinău – MOLDOVA;

Mykola Barulin, Candidate of Agricultural Sciences, Associate Professor, Head of the Department of Ichthyology and Fish Culture, Belarusian State Academy of Agriculture, Gorki – BELARUS;

Mykola Fedorenko, Deputy Director, Budget Enterprise «Methodological and Technological Center for Aquaculture», Kyiv – UKRAINE;

Galina Curcubet, Prof., Research Centre of water genetic resources «AquaGenResours», Kishinev – MOLDOVA;

Dr. Bela Urbányi, Vice-Rector for General Affairs and Strategy, Head of Department of Aquaculture, Institute of Aquaculture and Environmental Safety Szent Istvan University, Gödöllő – HUNGARY;

Dimitar Taskov, PhD, Stirling University, Stirling – UNITED KINGDOM.

CONTENTS

ASSESSMENT OF THE SIMILARITY DEGREE OF *Gobiidae* FOOD COMPOSITION FOR FORMING POLYCULTURE IN THE SHABOLATSKY ESTUARY

M. Burgaz, marinaburgaz14@gmail.com, Odesa State Environmental University
Одеський, Odesa

Shabolatsky estuary is located in the northwestern area of Black Sea and was formed as Dnistro river estuaries, which were separated by a sand bar from the sea. The estuary belongs to the type of semi-open, brackish-water estuaries-lagoons. For centuries, the Shabolatsky estuary served as a place for marine and freshwater fish and was traditionally used for ranching mariculture [1].

One of the most important components of the ichthyocomplex of the Shabolatsky estuary are gobiids represented by the two most widespread fish species – round goby *Neogobius melanostomus* and grass goby *Zosterisessor ophiocephalus* [1].

An analysis of the food relationships for gobies, one of the main objects of ranching mariculture in the Shabolat estuary, showed that the maximum similarity degree in the diet compositions of the grass goby and round goby was observed in autumn (SD – 33.2), the minimum – in spring (SD – 20.8) (Table 1) [2].

Table 1

**Similarity degree of the diet composition of gobies from the Shabolatsky estuary
in different seasons 2009–2012**

Nutrition objects, in percentages by weight	<i>Zosterisessor ophiocephalus</i>	<i>Neogobius melanostomus</i>	<i>Zosterisessor ophiocephalus</i>	<i>Neogobius melanostomus</i>	<i>Zosterisessor ophiocephalus</i>	<i>Neogobius melanostomus</i>	<i>Zosterisessor ophiocephalus</i>	<i>Neogobius melanostomus</i>
	Spring		Summer		Autumn		Average for the year	
<i>Nereis diversicolor</i>	8,4	–	7,3	6,6	1,3	1,5	7,2	1,7
<i>N. sp.</i>	4,6	–	4,1	–	–	–	4,2	–
<i>Abra ovata</i>	3,6	1,8	–	0,2	–	0,02	2,4	0,7
<i>Mytilaster lineatus</i>	1,0	1,1	–	0,5	–	0,03	0,4	0,3
<i>Hydrobia sp.</i>	1,3	–	–	0,2	–	0,1	0,8	0,3
<i>Mysidae gen sp.</i>	–	–	1,4	0,1	–	0,1	0,1	0,4
<i>Idothea baltica</i>	22,2	8,0	47,5	4,5	79,8	23,4	36,8	12,7

Continuation of the table 1

Nutrition objects, in percentages by weight	Zosterisessor ophiocephalus	Neogobius melanostomus	Zosterisessor ophiocephalus	Neogobius melanostomus	Zosterisessor ophiocephalus	Neogobius melanostomus	Zosterisessor ophiocephalus	Neogobius melanostomus
	Spring		Summer		Autumn		Average for the year	
<i>Sphaeroma serratum</i>	7,0	53,4	2,0	15,3	–	26,3	5,3	37,1
<i>Gammarus lacusta</i>	35,5	0,2	18,2	11,1	8,4	6,6	27,8	4,8
<i>Gammarus sp.</i>	5,1	–	1,5	0,9	1,9	4,5	3,8	1,8
<i>Palaemon adspersus</i>	2,8	11,0	1,6	12,0	–	10,3	1,1	9,0
<i>Pomatoschistus marmoratus</i>	–	20,6	1,5	11,7	–	17,5	0,5	16,1
<i>Zosterisessor ophiocephalus</i>	1,0	–	9,5	–	–	–	2,7	–
<i>Neogobius melanostomus</i>	6,7	–	0,5	4,7	–	2,2	4,1	0,7
<i>N. fluviatilis</i>	0,6	–	0,5	21	–	9,5	0,3	8,3
SD	20,8		29,3		33,2		31,2	

In general, the similarity of the diets of these goby species from the Shabolatsky estuary is not great. They occupy close, but different food niches. Therefore, both species are quite suitable for forming polyculture for fish ranching [2].

ASSESSMENT OF THE DIET OVERLAP OF MULLET (MUGILIDAE) FOR POLYCULTURE IN THE SHABOLATSKYI LAGOON

M. Burhaz, marinaburgaz14@gmail.com, Odesa State Environmental University, Odesa
P. Shekk, Shekk@ukr.net, Odesa State Environmental University, Odesa

Shabolatskyi (Budakskyi) lagoon is one of the water bodies of the north-western Black Sea region, which is characterized by high biological diversity and fish productivity.

The native ichthyofauna of the lagoon includes *Mugil cephalus* (Linnaeus, 1758), *Liza saliens* (Risso, 1810), and *Liza aurata* (Risso, 1810). In the 80s-90s of the 20th century, a *L. haematocheilus* population (Temminck & Schlegel, 1845) was formed in the Shabolatskyi estuary and is capable of self-reproducing [1].

An analysis of the trophic relationships of the main objects of fish ranching in the
